

Clariance helps Little Food protect their crickets.

Akuino chose the Clariance platform to build a cricket farm reporting and safeguard solution.

Act v.s. React

Little Food can now act quickly based on the reports and alerts generated by Clariance, rather than waiting for something bad to happen.

Reporting

When Little Food wants to check the temperature, humidity, or CO2 in the air, all they have to do is login to Clariance. This helps them make adjustments to the environment.

Productivity

Having the ideal environment for their crickets means Little Food can raise and ultimately sell more crickets. It also means they spend less time validating the environment.

Disaster control

If something catastrophic happened to their cricket farm, Little Food would know it within minutes. Hopefully Little Food never gets to experience this benefit of Clariance!
