

Portable all-purpose water level monitoring

A wireless monitoring solution that instantly alerts you to flooding

Prevent damage and delays due to flooding with continuous monitoring of water levels

React quickly to flooding with instant alerts

Monitor in the toughest site conditions worry-free

Check real-time site conditions 24/7 from your mobile phone

Get started right away with quick and easy installation

Contact us now to get a custom quote for your construction site monitoring needs!

How it Works

1. Place the case in the spot you would like to monitor and connect the sensor to automatically turn it on.
2. Log-in to the mobile app to configure the alert settings and view real-time reports.
3. Receive instant alerts by SMS, phone call or email when water levels rise higher than the predefined level, enabling you to quickly respond and prevent damage to the site.

Learn more

Robust

The wireless water level detector is housed in a military-strength case that is water-proof, crush-proof and dust-proof to IP67 and STANAG 4280 standards.

Quick and easy to use

Just connect the sensor to the case and it will automatically start working. You can easily change the settings online from anywhere.

Continuous monitoring

The battery-powered monitor works 24/7 to detect rising water levels. You can check on the levels at any time via the mobile app or website.

Reliability

Clariance provides remote automatic maintenance for each unit on a daily basis. You can also check the connection at any time by pressing the test button.

Flexibility

You can easily define at which level you receive alerts, and can use the unit to monitor any excavations, pits, manholes, water tanks, etc. on-site.

Real-time alerts

When water reaches the pre-defined level, you will be instantly notified by SMS, automated phone call or email.
